EDUCATION

Dayananda Sagar College of Engineering
Information Science and Engineering - **9 CGPA**

October 2023 – Present
Bangalore, India

SKILLS

Programming Languages: JavaScript, TypeScript, GoLang, Python, Bash
Libraries/Technologies: Next.js, React, Express.js, FastAPI, LangChain, MCP
Tools/Databases: GitHub, PostgreSQL, MongoDB, Redis, ChromaDB, NeonDB, Firebase, Prisma
Cloud & DevOps: Docker, Kubernetes, Terraform, Istio, GitHub Actions, Monitoring, AWS, GCP

EXPERIENCE

Software Developer

November 2025 - Present

Klugsys

Germany (Remote)

- Built a **FastAPI backend** integrating **MongoDB** for requirements and policies, **Redis** for session state with 24 hour TTL and sliding window user memory, and **ChromaDB** with sentence-transformers embeddings. Secured multi-tenant access using **Clerk JWT** verification.
- Implemented a **ReAct agent** for policy Q and A using a **userId** scoped RAG tool. Policy uploads trigger rule extraction and vector indexing, enabling SRS versus policy requirement analysis with traceability mapping.
- Designed a **multi-agent backend pipeline** including a policy summarizer, requirement analyzer, and test case generator with coverage summaries. Deployed as asynchronous services with Redis backed state.

Full Stack Intern

July 2025 - November 2025

Open Healthcare Network

Kerala (Remote)

- Contributed to open-source **care_fe** healthcare platform with **global distributed team**, **authored/reviewed PRs** for **UI/backend features** and **mobile fixes**.
- Actively participated in **code reviews**, **issue discussions**, and **onboarding newcomers** while maintaining high code quality, comprehensive documentation, and open-source best practices.
- Took ownership of assigned issues end to end, from requirement clarification to implementation and testing, ensuring timely merges and stable releases.

PROJECTS

3RVision-Platform | *Terraform, Kubernetes, Istio Service Mesh, Prometheus, Jaeger, Grafana*

[GitHub](#) | [Blog](#)

- Built production-grade **Kubernetes + Istio service mesh** for 3-tier microservices (Next.js frontend, Go backend, Flask ML) with **Terraform IaC provisioning**.
- Implemented **canary deployments** (90/10 traffic split), **strict mTLS encryption**, circuit breaking, and **header-based routing** for zero-downtime rollouts.
- Deployed full **observability stack**: **Prometheus metrics**, **Jaeger distributed tracing**, **Grafana dashboards** with automated deployment scripts.

Adaptive Threat Modeler | *Go, Python, LangChain, GPT-4, AST, GitHub/Slack Integration*

[GitHub](#) | [Demo](#)

- Built a continuous **threat modeling system** that analyzes multi-language codebases, generates **dataflow aware threat models**, and provides security remediation with live **GitHub and Slack** integration.
- Engineered a modular architecture with a **Go backend** for static analysis and APIs, a UI for interactive threat visualization, and a **MCP agent** for AI assisted security auditing and automated issue creation.
- Implemented advanced static analysis using AST parsing, **CWE and OWASP vulnerability detection**, and **real time reporting** to streamline secure software development workflows.

ACHIEVEMENTS

- **Patent Published (Co-Inventor):** “Sustainability Analysis Method and System for Item Classification and Disposal Recommendations” in **The Patent Office Journal No. 46/2025** on **14/11/2025**. [View](#)
- **1st Rank, FantomCode'25:** Outperformed **80+** national teams by building a standout **AI-powered sustainability platform**.
- **Kubernetes Badge – Dev.to:** Recognized as top weekly **#kubernetes** author for “Learning Istio the Hard Way: A Real Service Mesh Lab with Canary, mTLS, and Tracing.”
- **Ranked 1st, Interns Leaderboard – Open Healthcare Network:** Achieved top position among **40** interns across all categories for consistent, high-impact open-source contributions.
